

PHY 6646 - Quantum Mechanics II - Spring 2021
Homework set # 7, due March 5

1. Problems 17.2.1, 17.2.2, 17.2.3, 17.2.4, 17.2.5 in Shankar's book.

2. Consider a particle of mass μ in the central force potential

$$\begin{aligned} V(r) &= -\frac{e^2}{r} && \text{for } 0 < r < R \\ &= -\frac{e^2}{r} \exp(-\lambda(r - R)) && \text{for } R < r < \infty \quad . \end{aligned} \tag{0.1}$$

This potential differs from the Coulomb potential only in the region $r > R$, where the Coulomb force is screened. The difference becomes negligible when $\lambda \rightarrow 0$. Consider this difference as a perturbation and calculate the first-order correction to the energy of the ground state of the hydrogen atom.
